UNDERGRADUATE PROJECTS

OnlineGemand JewelryManagementSystem

7/ 2024 - 10/ 2024

Web App (Group Project)

- Overview: A comprehensive web application designed to streamline operations for the gem and jewelry industry, consisting of seven interconnected subsystems
- Technologies: MERN Framework (MongoDB, Express.js, React.js, Node.js)
- Key Contribution:
 - Developed the Supplier Management System, including features for placing supply orders and managing supplier details.
 - Ensured scalability and reliability in the supplier data storage and retrieval processes

Android Studio Projects

7/ 2024 - 10/ 2024

1. DailyPlanner Pro

- Overview: A productivity app to help users manage daily tasks efficiently.
- Technologies: Kotlin, Internal Storage
- Key Tasks:
 - Designed and implemented user-friendly interfaces.
 - Developed database interactions for task storage and retrieval.
 - Integrated notification features for reminders.

2. Coffee Shop App

- Overview: A prototype mobile application designed to demonstrate functionalities for managing coffee orders and inventory in small businesses.
- Technologies: Kotlin
- Key Tasks:
 - Developed an interactive menu and ordering system.
 - Created a user interface for inventory tracking and sales management.
 - Demonstrated functionality through interactive prototypes without implementing data storage procedures.

Vehicle Rental System (Group Project)

3/ 2024 - 5/ 2024

- Overview: A web-based system designed to manage vehicle rentals, consisting of four sub systems for various functionalities.
- Technologies: Java, MySQL
 - Key Contribution:
 - Developed the Driver Management System, focusing on managing driver assignments, availability, and details.
 - Implemented back-end logic to ensure efficient driver scheduling and data management.
 - Integrated the driver subsystem with other parts of the rental system for smooth data flow.

Online Voting System for Reality Shows

7/ 2023 - 11/ 2023

- Overview: A web-based system designed to facilitate voting for reality shows, consisting of five interconnected subsystems.
- Technologies: HTML, CSS, PHP, JavaScript
- Key Contribution:
 - Built the Voter Management System using PHP, focusing on implementing CRUD operations for managing voter registration, updates, and deletions.
 - Ensured secure data handling for efficient voter record management.
 - Designed and implemented user-friendly interfaces for both voters and administrators.
